## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 6-12, 17-19, 21-24, 26, 27, 29-33 and 35 are rejected under 35 U.S.C. 102(b) as being anticipated by Minfelde et al (US Patent Application Publication 2003/0045879).

Minfelde et al disclose a titanium or stainless steel (**Page 4, Paragraph 0050**) device (**Figures 1-5**) comprising: a bone-engaging member (**1**) with a spherical head (**9**) polyaxially connected to a receiver (**4** together with **14**) via a cavity (**8**); the receiver also providing an U-shaped (defined by legs **18, 19**) recess (**25**) for seating spinal rod (**3**); an externally threaded set screw (**23**) which interface with internal threads in the receiver. In use, several of these devices are aligned along a spinal rod for corrective surgery.

### ***Response to Arguments***

Applicant's arguments filed October 26<sup>th</sup>, 2006 have been fully considered but they are not persuasive. Applicant alleges that Minfelde et al do not disclose an U-shaped receiver that when having a rod fixed within it does not fix the bone-engaging member. Minfelde et al as previously explained clearly define a receiver (**16**) with legs (**18, 19**) defining an U-shape for receiving a rod (**3**). When rod **3** is fixed in the receiver

Art Unit: 3733

as shown in **Figure 2c**, it is clearly shown that the rod is fixed to the receiver when the screw (1) still freely moveable (until it as well is fixed by 42).

Applicant further argues that the device of Minfelde et al is not used with a plurality of devices with U-shaped receivers along a spinal rod. It is inherent that at least two bone-engaging members are present in order to hold a spinal rod in a fixed orientation. As further evidenced by **Page 1, Paragraph 0002** and **Page 4, Paragraph 0052**, Minfelde et al discuss "connectors." In paragraph 0052, Minfelde even goes to say how the a rod can be placed without prior shaping because the connectors can adapt to the geometry of the rod. It is not found persuasive in the slightest that Minfelde do not indirectly, directly or latently disclose a plurality of connectors in use for a surgical procedure requiring at least two connectors requiring the specifics of their design.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3733

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
